When running MetaNeuron on some Mac computers with a high resolution display, the MetaNeuron graph does not display properly. To correct this problem, do the following:

Open the Mac Terminal (go to Applications / Utilities)

Type the following in the terminal command line:

```
open /Applications/Metaneuron.app --args -AppleMagnifiedMode YES
```

On older Mac computers, the following might work

Right-click (or control-click) the MetaNeuron icon and choose "get info"

Check the "Open in Low Resolution" box
